

TrackAsset is a complete RFID enabled corporate asset tracking solution from TrackIT. TrackAsset streamlines and automates the process of corporate asset tracking from the asset acquisition stage to its release. It helps in effectively manage organisation's physical assets and keep an effective inventory of what assets they own and how those assets are used through out. Companies can use RFID to reduce their operating costs by improved asset tracking solutions to decrease maintenance costs, and optimize utilization.

TrackAsset is flexible and completely automates the asset and inventory tracking. With rapid increase in physical assets of an organization, it is becoming increasingly difficult to track and maintain assets in an easy and effective way. Asset stock taking, consolidating the details in a meaningful way and reporting is cumbersome and time consuming with existing methodologies. Currently, physical numbering is widely adopted. The stock taking in such a case requires a skilled person to collect inventory, which takes a long time and is error prone. Barcode solution is an alternative, but the barcode label itself may not last long as it degrades within a short time.

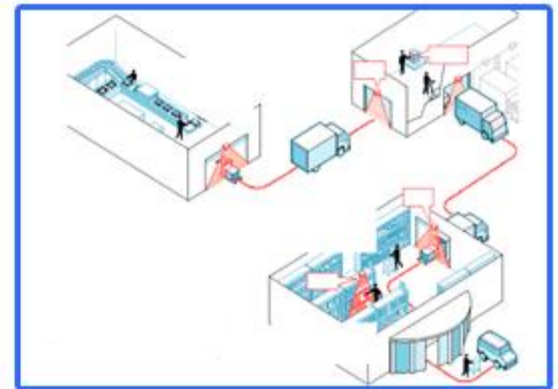

Labeling assets with RFID tag inlay is an effective and long lasting solution. The asset information is maintained in a host based database along with the corresponding tag identification number. The RFID tag label is affixed to the asset with a strong adhesive. If necessary, asset information like warranty, vendor, service dates etc., can be written to tag memory. The information can also be encrypted if necessary. The asset tag ID and details can

be read by a RFID reader enabled PDA or a rugged hand held device with built-in tag reader, conforming to IP54 safety rating. With TrackAsset, stock take and update can be performed by even an unskilled person.

Industries like manufacturing, retail, construction, equipment and defense can all benefit from the TrackAsset to track the real time asset information. Benefits such as transparent inventory and control, oversight of circulating assets, integration of all participants in the process chain, life-cycle documentation can be achieved.

- Host based asset database
- Browser interface for access in a Intranet or internet or VPN
- Hierarchical structure of assets to organize assets in groups
- Labels with RFID inlay for long lasting and contact-less scanning of asset tags
- Read/Write service, maintenance or any custom information on RFID labels
- Warranties, AMC, Lease tracking possible
- Mobile rugged handheld unit to automate data collection
- Track asset status in addition to custom information
- Stock take/audit can be performed by any person
- Reduce shrinkage and costs
- Reduce the time taken for stock take/ audit
- Improve audit accuracy
- Track the asset from acquisition to release, automatically.

TrackAsset allows you to do more of what you are best at... your business!
