

TrackVehicle aims at providing reliable and quality information based on the current and past locations of all vehicles to the Customers. TrackVehicle combines three powerful technologies, GPS, GPRS and RFID in order to provide end-to-end tracking of all the vehicles. The Vehicles can be easily tagged using RFID tags and tracked through GPS equipment attached to the Vehicle. The movements of these vehicles can be tracked on a Google Map, based on the Latitudes and Longitudes sent in real-time by the GPS/GPRS devices.

It can work in multiple medium and is integrated with other application which can leverage from real time location of their vehicles. It offers unique and comprehensive RFID solutions for various transport related establishments like large fleet companies, goods carriers and enables an organization to effectively manage, track, support and plan all day-to-day vehicle-related activities.

The customer can, at any time, login through the software provided, using the vehicle number and view the status of vehicle during transit on the Google map. In addition, at any given time will know the position of the vehicle, its speed, number of halts, and the status of Vehicles. If the device is tampered an alert is sent to the administrator. TrackIT vehicle tracking system not only tracks but also monitors the fleet or vehicle movement with satellite photos, near real-time location updates, and detailed reporting features.
